Answer by letter or QSL-card

PREFACE

In preparing the ninth edition of WRH, the ever-growing interest evinced by radio corporations in this publication has been noted with pleasure. Nearly all the radio organisations in the world now contribute to WRH, and more and more of them use WRH as a propaganda medium for their countries and their broadcasts. In consequence a considerable enlargement of this edition has proved necessary. This, coupled with continually rising costs, has made it necessary slightly to increase the sales price, but this far from covers the extra expenditure involved.

Cooperation with certain Latin American countries' broadcasting organisations is still lacking, but I trust that the next edition—the tenth—will be complete in this respect also, so that WRH's jubilee, which coincides with the 10th anniversary of the founding of the United Nations Organisation, will be perfect in every respect.

The road to this target has been long and difficult, but the growing interest shown year by year has been a souce of encouragement and a spur to continue. The tittl page of this edition bears witness to the good cooperation with the radio corporations all over the world, but, unfortunately, it has not been possible to mention all those who recommend the work and aims of WRH. However, they are referred to in a special pamphlet that will be sent on request.

My thanks are also due to the United Nations, UNESCO, the European Broadcasting organization of Geneva, the International Broadcasting organization of Prag, and the Danish Society for their assistance in the past year, and to the many listeners the world over who have contributed to WRH, and thus given proof of their faith in its mission and value.

Many new radio and television stations have been included in this edition, and a survey of language broadcasts and the growing extent of the short wave table have entailed a three-column arrangement.

O. Lund Johansen.

The Editor of World Radio Handbook seeks information from all stations engaged in broadcastings and interested in international broadcasting and publish the information as they communicated to him by the stations. The Editor cannot be held responsible for the correctnes of these information or for the not publishing schedules and other particulars of stations, which do not supply the information or for changes in the times and wavelengths of programmes made after the current edition has gone to press.

THE LATEST NEWS

Message from the United Nations to Listeners

by Mr. Benjamin A. Cohen

Assistant Secretary-General of the United Nations in Charge of the Department of Public Information.

Benjamin A. Cohen

We live in a world of transition and change. Upon our individual daily lives, in the formulation of national policies and in the adjustments required among the members of the world community, we feel the impact of the thoughts and actions of men physically unrelated to us. The continuous interplay of spiritual values leads peoples and nations towards growing integration and the overall concept of a single physical and moral world commends itself to us. We are no longer—as individuals or as nations—isolated islands unto ourselves. We are living in the age of communication.

For long ages, to communicate with men outside one's own small community and come to see that they also had their own important interests, and traditions, and attitudes, was difficult, almost impossible. Even today, one hears of villages in a great country where the people of a hamlet five miles away are still spoken of, by older persons, as "foreigners". The growing interdependence of life, in almost all aspects, is doing much to combat such an attitude; but that pattern of thinking is still more deeply imprinted on many minds than individuals realize. Ignorance, misunderstanding, prejudices and resentments, popular anger, incidents, uprisings, war—that is the fatal devilish chain which, in a sense, made all our forebears prisoners of war—prisoners of the institution of war. With all this in mind, it is no longer possible to set too high a price on the new means of mass communication, the tools fashioned in our own days for workers in the field of understanding. Explain them even in terms of physics and they still remain miracles.

When you meet a friend and say, "Hello, How are you?", he hears your words and so does any passer-by. Then they fade into the air, or the wind sweeps them to nothingness down the street or across a field. If, on the other hand, you sit in front of a broadcaster's microphone and say, "Greetings, everybody", the instrument, true to its name, picks up these small sounds and passes them to transmitters capable of carrying them round the world in one-seventh of a second. Potentially you have greeted the whole human race.

Again, if you sit at home and turn a button on one of those magic talking boxes, you yourself can go round the world in eighty seconds. A communique read in Graustark, a band playing in Ruritania, a girl singing in Atlantis; these are a few of the snatches of programs that reach your ear. Still by your own hearth, you may bring on a screen images of far-off happenings, from orators in full euphoria, dramatic performances, footballers at play, funny men, ballet dancers and the majesty of great coronation ceremonies.

Radio, familiar to untold millions everywhere, and television to many millions in fewer countries,—what do they mean in 1955? In the first place, that mankind has abolished many of the awkward consequences of distance and separation and has thus reached a point on the spiral of history above, and not unlike that where we stood 2,500 years ago, when all citizens could be present at town meetings and themselves have a direct voice in the conduct of public affairs. Now that the world, whether we like it or not, has become one place, where the actions of any state affect in some degree all the rest, listeners and viewers are in a position to be present aurally, perhaps even visually, at any great centre of human activity from a General Assembly meeting to the Olympic Games. They should be counted among those best able to understand something of the complex interplay of forces at work in the world and therefore best able to grasp what attitudes and actions make for the general good.

In this regard, however, two facts must be remembered. First, almost all of us who hear broadcasts or watch television have some choice over the kind of sounds and images to which we open our minds and over the way in which they affect our thinking and our actions as citizens and as human beings. In the words of Marcus Aurelius, "The soul is dyed by the thoughts", and these programs that come through the air offer a remarkable selection of dyes. The listening and viewing habits of countless millions of men and women cannot fail to play a significant part for better or for worse in the social and political developments of our times. The second fact is that radio and television are simply means to serve certain ends. Used responsibly and imaginatively to bring the public the best in all fields, they can have an incalculable and lasting influence for good. In unwise hands, their effect could be the reverse.

So it is with the United Nations. The organization is an instrument to be used by Member States to help them achieve, through its machinery for international co-operation, the lofty but eminently practical purposes for which it was created. All the year round, broadcasts and television programs, prepared by the United Nations Department of Public Information for use by national and local services throughout the world, give a balanced, straightforward account of what is being attempted, of setbacks and of progress. To those of us who work on these programs the comments of listeners and viewers, critical or otherwise, are of the greatest value. Our first thought for them is of warm appreciation for their help in sending reports. Our second thought centres on the firm hope that, since the United Nations, like any other instrument, such as radio or television, will function only as wisely and effectively as the people handling it are wise and forthright, they will see in 1955 still more steps towards the goal of a decent peaceful life for everyone.

Message from the United Nations Benjamin A. Cohen

HOW TO USE THE WORLD RADIO HANDBOOK

The practical information given in the following section in respect of the broadcasting services of each individual country includes:

The Addresses of the broadcasting companies in question. Where broadcasts are commercial this is stated.

Names and Titles of the leading personalities in each company.

List of Stations operated by each company with call signs of their transmitters, all frequencies and wavelengths (medium- and shortwaves), as well as their power expressed in kilowats or Watts.

Each short-wave station has its own identification call sign consisting of 3–5 letters or a combination of letters and figures of which the first, or two first, denote the nationality in accordance with the international list of station prefixes. (See page 146.) Some short-wave stations, the American for example, use these call-signs when announcing themselves.

Long and medium wave stations are divided into three categories, viz. (1) **Main Stations**, which are so powerful that they can generally be heard throughout the whole area of the country in question, and from which most of the broadcasts emanate; (2) **Regional Stations**, which can be heard only within a certain area of the country, and whose broadcasts consist partly of re-transmissions of the programmes of the main stations and partly of their own programmes; (3) **Relay** and **Local Stations**, which mostly re-transmit main station programmes. These relay stations are the weakest, and are local stations which can be heard only within a limited area; The above-mentioned stations are all **AM stations**, i.e. amplitude-modulated stations. In addition, there is a fourth category of station: 4) FM stations, i.e. frequency modulated stations, in order to give listeners a reception free of interference. These stations have only a very short radius, and are consequently local stations. The wavelength is expressed in megacycles, whereas the frequencies of AM stations are expressed in kilocycles (see section: Frequency and Wavelength).

Most short wave stations use directional aerials, i.e. their broadcasts are directed toward particular areas, and these give the names to the various services: European Service, Near Eastern, Middle Eastern, Far Eastern, Pacific, Latin-American, Caribbean Service, etc. Language and frequency employed vary according to the area to which broadcasts are directed.

Times are shown on the 24 hours system. In this system midnight is 00.00 hrs., 3 am: 03.00 hrs., 10 am: 10.00 hrs. and midday 12.00 hrs. Instead of starting again at 1 o'clock, as the 12-hour system does, the 24-hour system continues to increase the number of each hour until 23.59 (11.59 pm.) is reached. Thus 13 hrs. is 1 pm., 17.00 hrs. 5 pm. and so on. The great advantage of the system is that it eliminates any possible confusion between times a.m. and times p.m.

Frequency and wavelength. Frequency and Wavelength are divided into the following groups: **Long waves** with frequencies from 133 kc/s (1961 metres) to 500 kc/s (600 metres). **Medium waves** with frequencies from 500 kc/s (600 metres) to 3000 kc/s (100 metres). **Short waves** with frequencies from 3000 kc/s (100 metres) to 30000 kc/s (10 metres).

The wavelength of a station is measured in metres, a metre being approximately $1^1/_{10}$ yards. The wavelength is the distance in metres between the crests of any two consecutive waves. For every wavelength there is a corresponding frequency, which is the number of complete waves, or cycles, sent out by a station in every second. A kilocycle is 1000 cycles; a megacycle 1.000.000 cycles.

There is a simple relationship between these quantities as both wavelength and frequency are determined by the velocity of propagation of radio waves in space; this relationship is:
Wavelength = Velocity/Frequency; or Frequency = Velocity/Wavelength

As the velocity of propagation in space is, in round figures, 300.000.~~000~~ metres per second, any of the quantities—metres, kilocycles or megacycles—are readily converted into the other forms by means of the following formulae:

Metres to Kilocycles	**Metres to Megacycles**
Metres = 300,000/Frequency (kc/s)	Metres = 300/Frequency (Mc/s)
Kilocycles to Metres	**Megacycles to Metres**
kc/s = 300,000/Wavelength (metres)	Mc/s = 300/Wavelength (metres)

Shortwave broadcasting takes place mainly on the following metre bands (m.b.):

49 metre band – 41 metre band – 31 metre band – 25 metre band – 19 metre band – 16 metre band – 13 metre band and 11 metre band.

Many short-wave stations lie outside these bands. The 60 and 80 metre bands are used for local broadcasting, i.e. for reception over relatively short distances, which applies, for example, to many South and Central American stations and stations in Central Africa.

Broadcast receivers have their tuning scales calibrated in metres, kilocycles, megacycles or with the names of the principal stations. Metres or kilocycles markings are as a rule used on the medium- and long-wave bands, while metre bands, kilocycles or megacycles are used on the short waves.

In the following pages you will find a large variety of call-signs and frequencies. In many cases these belong to the same transmitters which are connected to different aerials designed to radiate signals to the best advantage in respect of each service. The various call-signs serve to identify individual transmissions.

Many programmes are broadcast simultaneously from several transmitters on different frequencies, which enables you to select the one which is the most clearly audible in your area or on your particular receiver. If reception on one of the frequencies used is poor, you should examine reception conditions on the other frequencies employed by the same station. On page 21 you will find a table of the most suitable

metre bands for best short-wave reception in every part of the world at various times of the day throughout the year 1955.

Power specification of radio transmitters: Generally speaking the specified power of a radio station is the power delivered by the transmitter to the antenna. In normal cases a major part of this power is radiated (depending upon losses in the antenna) for the benefit of listeners. On long waves the radiation is almost uniform in all directions. On medium waves directivity may be provided for, for instance in order to reduce interference between cochannel stations. In such cases the field strength is amplified in certain directions and suppressed in other directions.

On short waves directive transmitting antennae are commonly used, the power amplification being 10–30 in the desired direction.

Daily Programmes: Under this heading you will find information concerning the total broadcasting hours on the different frequencies employed during transmission hours, as well as a survey of the news.

Announcements: The language alone is not a conclusive indication of the origin of a broadcast to which you may be listening. Hearing a programme in French or Spanish, for instance, does not necessarily mean that it is transmitted by a French or Spanish station respectively. To make sure of identifying a station correctly, it is, therefore, essential to wait for the announcement which every station broadcasts at regular intervals. These call signs are given in this book for practically all the stations listed.

Interval-Signals: For identifying stations it is also of importance to know the signals used during the intervals between programme items. Under each station you will, therefore, find a indication of the type of signal used, and in many cases a reproduction of the musical notes of this signal.

QSL-Cards. As indicated in the survey of the broadcasting services of the various countries, many of the stations listed are interested in receiving reports from listeners in respect of their transmissions. These stations acknowledge reports by sending listeners a QSL- (verification) card or a letter. For most of these stations it is stated whether reports are answered by QSL card or letter and if return postage is required. Many short-wave listeners make a hobby of collecting these QSL-cards which are often elaborately designed and colourful, sometimes with pictures of the station and its location, photos of the personnel, and other interesting particulars.

Reports from Listeners: Listeners' reports can in most cases be written in English, but Spanish is preferable when writing to South or Central American stations.

Report of Reception. I heard your station on the (date) from—to—(GMT, EST, CST or PST) on kc/s. **The strength** (varied (fading QSB) or was steady) and (just audible QSA1, weak QSA2, rather good QSA3, good QSA4, or excellent QSA5)—(with no disturbances; with disturbances from atmospherics QRN; with interference from broadcasting stations or telegraph stations QRM).

My receiver is a with tubes.

My antenna is of the type, feet long, outdoors or indoors.

Details of Programme: F. inst. announcements, languages, symphony, jazz or dance orchestra, classical popular, native etc. music, interval-signal, man or woman.

Remarks or suggestions: ..... **My address:** .....

If reply postage is requested by a station, enclose with your reports an International Reply Coupon obtainable at most post offices. The full address of each station will be found in the individual surveys.

Local Time Conversion:

On page 16 you will find a Local Time Conversion Table which gives the local times (summer and winter) in most parts of the world in relation to Greenwich Mean Time (G.M.T.). For example, from September to May it is 15.00 hours New York time when it is 20.00 hours G.M.T., since the table indicates that local time in New York is 5 hours ahead of G.M.T. From May to September U.S.A. introduces day-light saving time and, consequently, it is 16.00 hours New York time when it is 20.00 hours G.M.T.

How to tune in your favourite short-wave station:

It requires some practice to adjust receivers correctly to a short-wavestation. A movement to either side by a mere hair's breadth may give the correct adjustment. Once the station has been found, it must be finely adjusted by gently turning the dial knob backwards and forwards, simultaneously increasing the volume until the station in question can be heard distinctly, and identified. If the tuning knob is turned too quickly, a weak station may easily be passed over.

Reception conditions for short waves can be very caprious. After listening to a far-distant station for a short time, it may suddenly disappear completely (fade) and not return immediately.

Some broadcasts are often transmitted on several wavelengths simultaneously. If after adjusting your receiver to the station to which you wish to listen, you find reception unsatisfactory, try the other wavelengths used by the same station during the period in question.

How to identify a short-wave station:

Whenever you come across a station which is unknown to you, proceed as follows for identification: Read the approximate frequency indicated on your dial in megacycles or kilocycles or the wavelength in metres. Find from the table of frequencies and wavelengths what station are working in the neighbourhood of the reading shown by your dial. When you have reduced the source of the broadcast to one or two possibilities and at the same time noted details of the program heard and the language used, check these data against the program surveys printed in this Handbook. For confirmation it is advisable to wait for the station announcement or interval signal mentioned previously.

Television: For information about television stations please refer to page 138.

ROCKE offers complete range of broadcasting equipment, from the speech input systems to powerful broadcast and TV transmitters — products of the foremost American manufacturers, each an established and respected name in a particular phase of the broadcasting field. Backed by extensive research and manufacturing facilities of the Rocke Associated Factories and a world-wide experienced sales engineering organization, trained to serve your needs ROCKE is the best choice for DEPENDABILITY, SERVICE and ECONOMY.

ROCKE COMPLETE LINE INCLUDES

Equipment of the Following Well Known American Manufacturers

- **AMPEX ELECTRIC CORPORATION**
  — foremost manufacturer of professional Magnetic Tape Recorders in universal use by broadcasting stations and recording studios. Advanced design and precision workmanship make Ampex the leader in this field. Various console and portable models available for heavy duty service Automatic Programming System.

- **AMPEREX ELECTRONIC CORPORATION**
  — a complete line of transmitting and rectifying tubes for radio broadcasting.

- **ELECTRO-VOICE, INC.**
  — is a foremost supplier of microphones for television and broadcasting networks, communication equipment, and public address installations. Electro-Voice has specialized for many years in the manufacture of fine microphones, and is the leader in the field today.

- **GATES RADIO COMPANY**
  — leader in sales of AM broadcasting equipment. Now in its 31st year of business, GATES is the largest supplier of AM radio broadcasting equipment in the U.S.A. Gates manufactures complete equipment for AM & FM broadcasting, television transmitters, studio equipment, audio amplifiers, monitors, and a full line of broadcast transmitters from 250 watts to 50 KW.

- **GENERAL PRECISION LABORATORY, INC.**
  — television camera chains for local and remote control, studio equipment. Video recorder for reproduction on film of TV program material — used in conjunction with GPL Rapid Film Processor to produce finished sound film within less than 60 seconds after live program.

- **POLARAD ELECTRONICS, CORPORATION**
  — has attained recognition as a leader in the design, development and manufacture of television studio equipment. The ever-growing list of Polarad television and industrial installations in the United States and abroad attests to its world-wide leadership. Polarad products include microwave signal generators, color bar generators, color synchronizing generators, color video monitors, wave form monitors, spectrum analyzers, micro power meters and many other items for laboratory work.

- **RADIO ENGINEERING LABORATORIES**
  For remote broadcasts, REL Mobile Link Equipment, operating in either the 150-175 Mc/s or 890-960 Mc/s bands offers proven dependability and noise-free high-fidelity performance.

- **STAINLESS, INC.**
  — Towers and arrays incorporating the most advanced designs. All welded tubular members offer distinct advantage of less wind resistance and greater structural stiffness than the old angle iron type towers. Guyed or self-supporting, insulated or non-insulated. Towers up to 1700 feet.

Rocke International is the Export Sales Division for the above manufacturers, with an organization, reaching every free country in the world. Branches in: Paris, London, Brussels, Turin, Zurich, New Delhi, Bombay, Madras, Manila, Beirut, Mexico City, Havana, Caracas, Sao Paulo, Buenos Aires, Costa Rica, Puerto Rico. RADIO NORWAY

maintains a daily short wave service, which is directed to all parts of the Globe. Each section is of one hour's duration.

These programmes are first and foremost aiming at keeping Norwegians abroad, the men on board the Norwegian Merchant Marine and friends of Norway everywhere informed about what is going on in Norway, but the last twenty to twentyfive minutes of each one hour transmission will usually consist of Norwegian music or music by Norwegian artists. This musical section is introduced in Norwegian as well as in English. The vocal parts of the transmissions are given in Norwegian, but station identifications in English are given every fifteen minutes. Every Wednesday and Sunday we have a letter box programme, in which we play our listeners' request records. Just write to RADIO NORWAY, Oslo, Norway. These special transmissions are sent out six times a day.

Every Sunday we have a twenty minute addition in English to each of the one hour special programmes. It is called »Norway this Week«, and we are there trying to present Norway in small glimpses from the cultural, economical and political life in our country. For technical details turn to page 56 in this book.

UNESCO RADIO

While the distribution of Unesco's transcriptions in the form of talks and documentaries has expanded considerably during 1954, a greater emphasis has developed along the lines of seeking listener reaction. To get a clear idea of the impact of Unesco programmes in over 100 countries and territories throughout the world is an undertaking which requires a good deal of time and patience. At this stage the practice has been developed of supplying catalogues and texts of programmes to radio organizations and of supplying the actual transcriptions upon request. There is abundant evidence at present of an increasing demand for such transcriptions around the world. An English series of 13 documentaries, for example, has been requested by 71 Australian commercial stations as compared with 57 stations in that country in 1953. United Nations Radio in New York also undertakes distribution of Unesco documentaries throughout the United States and among a number of stations in Canada.

Some 28 radio organizations throughout the French Union broadcast the greater part of the material supplied to them, while the main stations in Germany and Austria have shown an increasing interest in German language programmes. The number of stations in Spanish-speaking countries which use Unesco material has increased to the point where it has been found necessary to process discs on microgroove in order to cope with the problem of multiplicity of copies.

Because of the limited staff and budget, it is seldom possible to produce many programmes in those national languages which are normally spoken only in one or two countries. In these cases the text in English or French is supplied for local adaptation. Some countries which have shown particular activity in adapting these texts during 1954 are Japan, Israel, Indonesia and Thailand. In India, Pakistan and Ceylon also, some progress has been made in adapting Unesco texts into regional languages such as Tamil, Hindi and Urdu. An example of an adaption into a multiplicity of languages was the musical programme "The Canticle to Hope" which was broadcast in 66 countries and territories in a total of 10 languages: English, French, Spanish, German, Norwegian, Swedish, Danish, Hebrew, Serbo-Croat and Japanese.

Besides such feature documentaries and folk music programmes, which are normally reproduced in French, English, German and Swedish, a regular weekly 5-minute commentary entitled "Hier spricht Unesco" is distributed in German-speaking countries and a weekly commentary, "Le Chronique de l'Unesco", is regularly broadcast throughout the French Union.

While it has been found that most countries throughout the world prefer ready-made programmes in transcription form, some radio organizations are prepared to build programmes on Unesco themes in their own studios and according to their special needs. In these cases Unesco Radio relies upon special arrange-

PHILIPS

Roaming around the world in your armchair

Few of us have ever had the opportunity to go and see places all over the world. To see famous towns, to be eye-witnesses at great world-events, to attend concerts conducted by a Toscanini or other world-famed maestros, or to learn what is going on in other countries.

But do you realize that you can make real world trips day after day whenever you want? You can do it with a Philips radio. Philips radio spans the world and brings continents and countries so close to each other that one day could be enough to visit London with its famous Music Halls, to hear real old Vienna waltzes, to dance with your friends on the music of America's favourite dance orchestras, to attend an international sport-meeting in France or to dream whilst listening to the soft and melodious music of the Hawaiian islands.

This is what radio can do, especially radio sets with well-balanced short-wave reception possibilities.

Philips are one of the pioneers in modern radio, particularly on short-wave reception and transmission. From 1927, when the first Philips' short-wave transmission on Philips own station in Holland could be clearly heard in all corners of the world, Philips have been in the field to develop radio to its wonderful perfection of our present days.

This restless research, with many achievements, for which Philips are directly responsible, culminates in a wide range of excellent radio receivers for reasonable prices. Sets for everybody. Sets enabling you to roam all over the world day after day whenever you want.

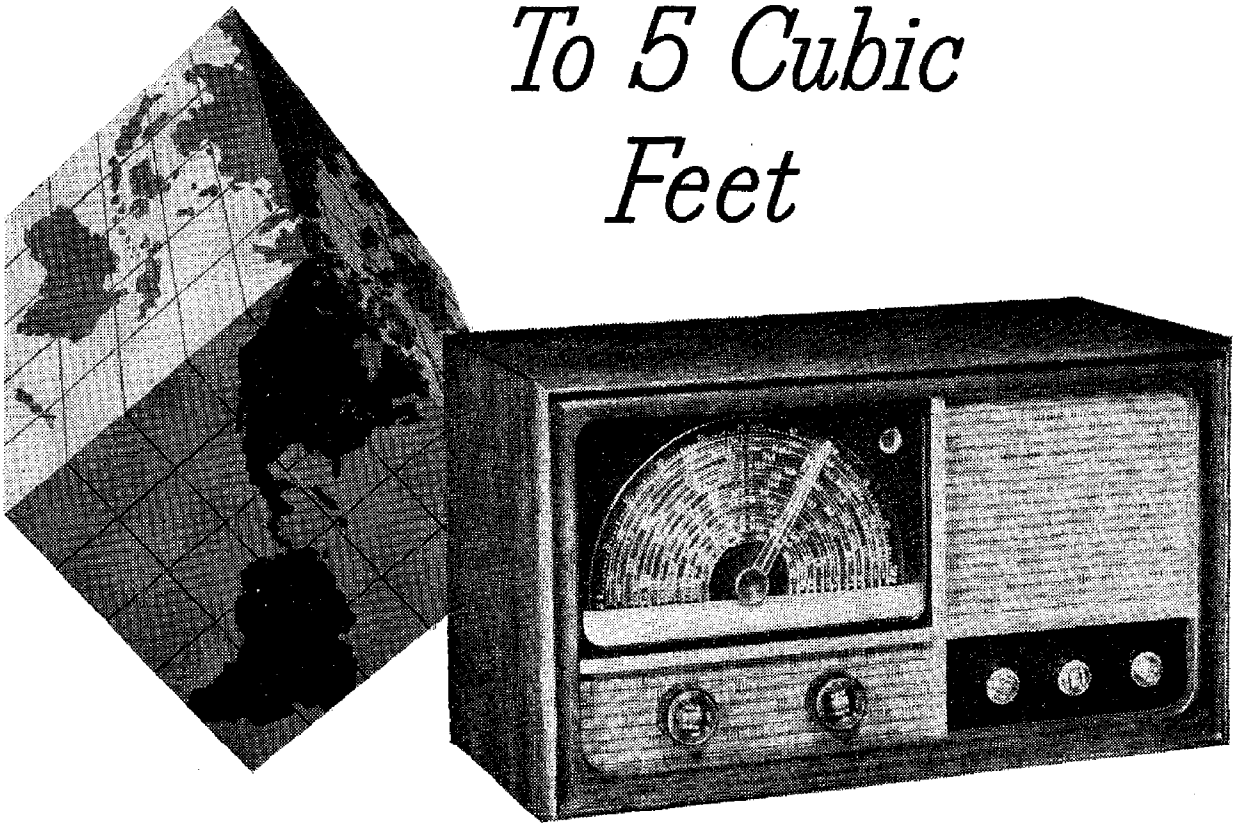
General Electric's Model X-371 . . .
For Complete All-Wave, Global Radio Reception!

The World Has Shrunk To 5 Cubic Feet



It's truly a small world when you tune in your X-371. Into its 5 cubic feet, General Electric has packed the latest electronic advances. The result is a table radio that brings you clear shortwave reception from stations thousands of miles away!

Tuning Is Simpler, Quicker. Model X-371 offers you 9 shortwave bands, 2 general coverage shortwave bands, and one broadcast band. New "Rainbow range" dial lighting spotlights the band in use. Powerful 10-inch speaker gives exceptional tonal fidelity. Latest printed circuit techniques assure more efficient, stable operation. Completely tropic-proofed. Also available in Blonde Korina as Model X-372. See your nearest G-E dealer or write:

International General Electric Co., Dept. 43B, 570 Lexington Avenue, New York 22, N.Y., U.S.A.

RADIO AUSTRALIA

– the friendly voice of the Southern Continent –

The laughing call of the Kookaburra introduces the daily programmes of Radio Australia, the Overseas Service of the Australian Broadcasting Commission. Broadcasts are given in English, French, Indonesian and Thai. Transmissions are directed to South and South-East Asia, North America, the British Isles, Europe, Africa, New Zealand, Japan and the North and South Pacific Islands. For the best in musical entertainment, and for news and information about Australia and the outlook of its people on world events, you are invited to listen regularly to Radio Australia. An illustrated Programme Guide is sent free to all listeners on request.

Overseas Service – Australian Broadcasting Commission,
Post Office Box 780H, G.P.O. Melbourne, Australia.

For full information see page 96.

UNION EUROPEENNE DE RADIODIFFUSION (U.E.R.)
European Broadcasting Union (E.B.U.)

Seat and Administrative Office: 37, Quai Wilson, Geneva.
Technical Centre: 32, Avenue Albert Lancaster, Brussels.

INTERNATIONAL BROADCASTING ORGANIZATION OIR
ORGANISATION INTERNATIONALE DE BROADCASTING OIR

Address: 15, Liebknechtova, Prague 16, Czechoslovakia.
Cable: INTERADIF Praha.
Nature: International organization, having scientific purpose.
Governing Body: General Assembly consisting of one representative for each full member.

ADMINISTRATIVE COUNCIL: Consisting of 7 to 13 members.
Chairman: Representative of PR of Poland.
Vice-Chairmen: Representatives of USSR and Chinese PR.
Members: Representatives of – Czechoslovak Republic, Finland, German Democratic Republic, Lithuanian SSR, PR of Mongolia.

MEMBERS: PR of Albania, Byelorussian SSR, PR of Bulgaria, Chinese PR, Czechoslovak Republic, Estonian SSR, Finland, German Democratic Republic, Hungarian PR, Karelo-Finnish SSR, Korean People's Democratic Republic, Latvian SSR, Lithuanian SSR, Moldavian SSR, PR of Mongolia, PR of Poland, Rumanian PR, Ukrainian PR, Union of Soviet Socialist Republics.
Facilities: Technical Checking Centre: Prague, Czechoslovakia.
Meetings: General Assembly at least once a year, Administrative Council at least twice a year.
Publication: Documentation and Information Bulletin in Chinese, English, French and Russian issued every three months.
Relations with other international organizations: Official relations with the ITU and its advisory committees.

UNESCO (continued from page 13)

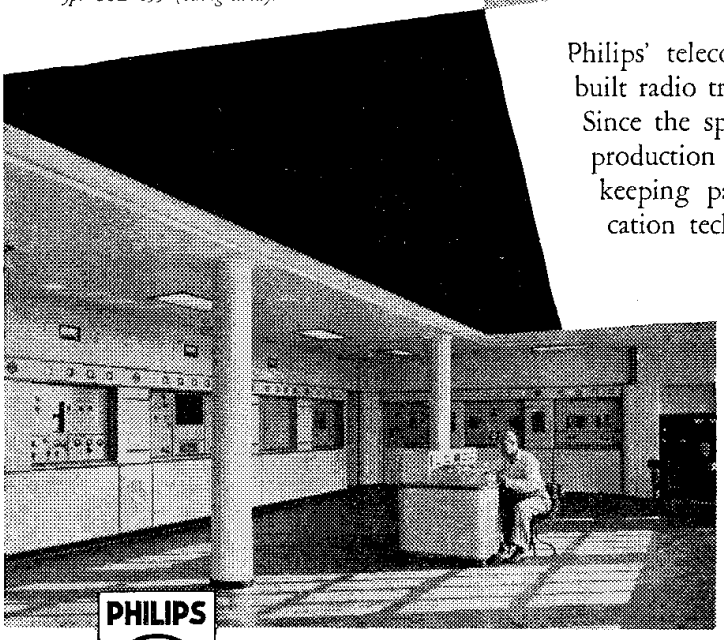
ments to meet individual cases. Where possible, producers have been invited for a short period to visit Unesco House and gather their own material for broadcasting. This arrangement has worked very satisfactorily.

The "Unesco World Review" which ia a weekly quarter-hour script programme, now in its seventh year, provides a supplementary means of getting Unesco material broadcast in countries which otherwise would have difficulty in obtaining such material. It is printed in English, French, Spanish and Arabic, and is also translated by radio stations into vernacular languages. At present this publication is distributed to fifteen hundred radio stations and networks in 105 countries and territories. A recent development has been the addition af a thousand broadcasting stations within the United States of America.

The objective of Unesco Radio is to disseminate knowledge and information of an international character which is not normally available to radio stations or which these stations have neither the time nor the means to prepare for themselves. It is part of the overall programme to promote interest in all those matters which are the concern of the United Nations and its various specialized agencies. It may be fairly claimed that Unesco Radio has already proved the practicability of disseminating knowledge and promoting international understanding through radio on a remarkably wide scale, in spite of vast divergencies of national cultures and standards of technical progress.

Radio communication

Below: Transmitting room of a Latin American broadcasting station equipped with Philips 50 kW s.w. broadcast transmitter, type SOZ 139 (left) and Philips 20 kW m.w. broadcast transmitter, type SOZ 199 (background).



Philips' telecommunication industries have designed and built radio transmitting equipment for well over 30 years. Since the spark-gap transmitters of the days of yore the production programme has been steadily increasing, keeping pace with the development of telecommunication technique and the demands of an evergrowing practice. Continuous research and vast experience have led to remarkable accomplishments, such as transmitters for national and world wide broadcasts, and communication receivers for professional and DX-work.

For particulars and expert advice please apply to the Philips representative in your country.

TABLE OF THE MOST SUITABLE METRE BANDS FOR BEST SHORT-WAVE RECEPTION IN EVERY PART OF THE WORLD AT VARIOUS TIMES OF THE DAY IN 1955.

Example: A listener located in eastern part of North America wishes to hear a station in Southern Asia on a January evening. By following the horizontal column of figures starting at North America on the left until it meets the vertical column under South Asia in the Winter section on the right, he will come to the figure 31. — This means that the 31 metre band is the most suitable for listening to the required station at that time. **Note:** The figures in the table below can only be regarded as average figures, as conditions will vary considerably from time to time due to irregularities in the ionosphere. Attention is drawn to the fact that the optimum wave bands as indicated correspond to transmission between the centers of the areas concerned.

The listener's area		Area of the transmitting station

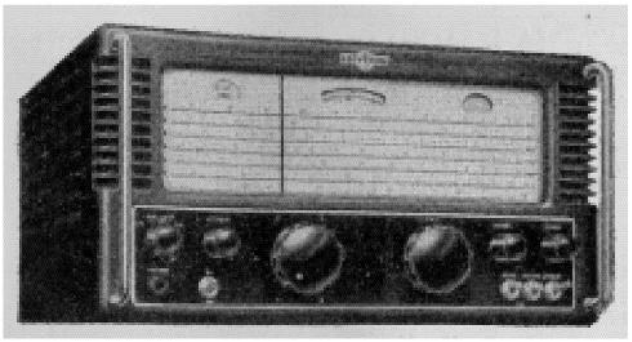
EDDYSTONE
MODEL '770R'
V.H.F. COMMUNICATIONS RECEIVER

FREQUENCY RANGE 19 Mc/s. to 165 Mc/s. CONTINUOUS COVERAGE



- Highly efficient signal frequency circuits.
- Substantial diecast rotary coil turret.
- Excellent frequency stability and selectivity.
- Accurate re-setting and ease of handling.
- High sensitivity and excellent signal-to-noise ratio.
- High quality push-pull output.
- For AM, FM, NFM and CW Signals.
- Robust construction and outstanding reliability.
- "S" Meter. Noise Limiter. Muting circuit.
- Preferred type valves.
- Finest workmanship throughout.

- A. C. operation. 110-250 volts. 40-60 cycles.
- Dimensions 16¾" x 15" x 8¾".
- Weight 60 lbs.

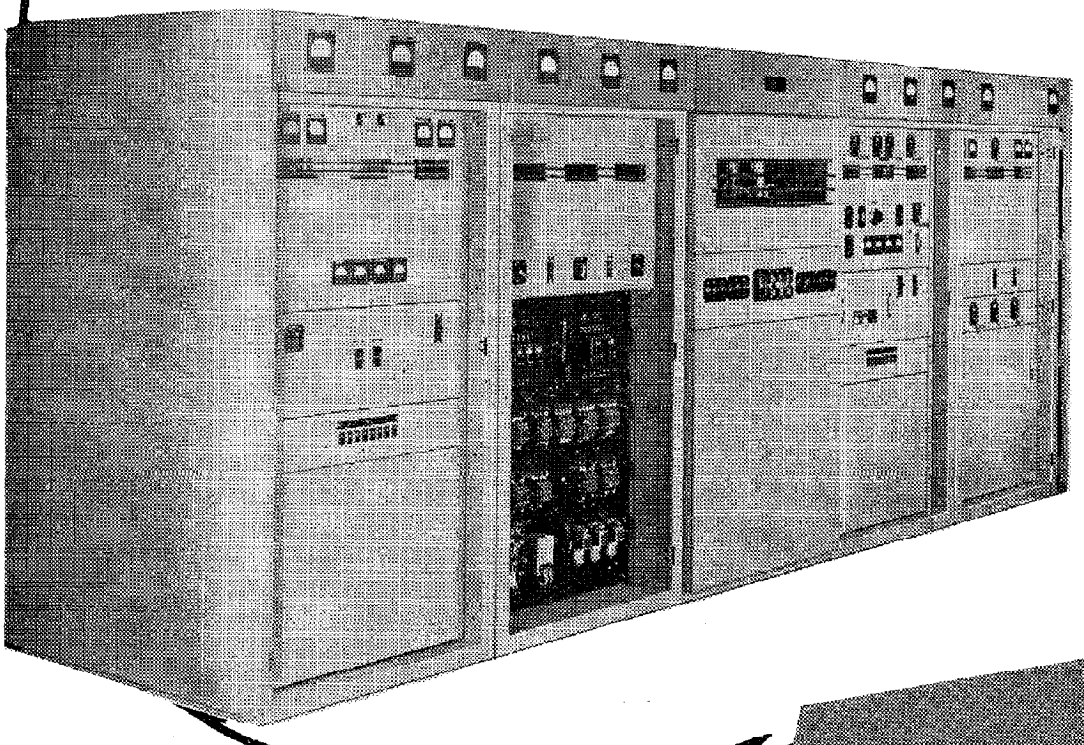
GATES

BROADCASTING *Equipment*

THE NEW GATES 20KW TRANSMITTER — designed for 20KW continuous duty broadcast operation in the 4-22 mcs. shortwave broadcast band, the new transmitter is continuously tuned up to the final amplifier stage. Full coverage 4-22 mcs. is obtained by means of easily removable latch-on coils in the final tank circuit.



Companion models for standard AM, 540-1600 kc., broadcast operation and for high speed 20KW telegraph service are also available.

COMPLETE EQUIPMENT FOR AM & FM BROADCASTING, TELEVISION TRANSMITTERS, STUDIO EQUIPMENT, AND A FULL LINE OF BROADCAST TRANSMITTERS FROM 250 WATTS TO 50KW.

GATES is the largest supplier of AM radio broadcasting *equipment in the U.S.A. The prime reason for GATES popularity, everywhere, is that while maintaining the highest standards of Quality, GATES equipment is always competitively priced — and equally important, costs less to install and to operate. Why not write today for descriptive literature and engineering data on this modern GATES equipment.*

ELECTRONICS!

Frathom represents an outstanding group of American manufacturers . . . each a leader in the development of a particular group of electronic products. RECORDERS and AMPLIFIERS, SEISMOGRAPHIC EQUIPMENT, COUNTERS and SCALERS, VOLTMETERS, SYNCHROSCOPES, CAPACITORS, TRANSMITTER TUBES, ACCELEROMETERS, RESISTORS, MICROMINIATURE COAXIAL FITTINGS, PLOTTERS, GENERATORS and CALIBRATORS are only a part of the components and systems available from leading manufacturers through Frathom — electronics specialists.

In addition to supplying the world's finest electronic products, Frathom is long experienced in export procedure and shipping techniques. Reliable representatives in many countries are constantly in touch with Frathom's New York office to clarify customer requests and eliminate unnecessary delays.

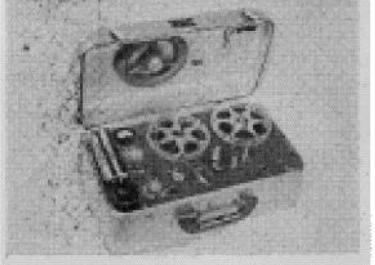
The MAGNEMITE

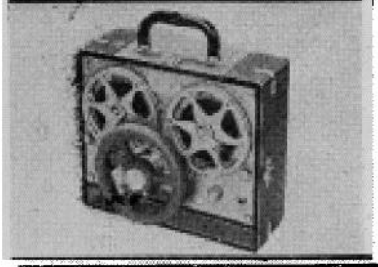
BATTERY-OPERATED SPRING-MOTOR TAPE RECORDER

Favorite of the World's Outstanding Broadcasting Stations and Recording Studios!

VU Magnemite



4-Speed Magnemite



Engineered and developed by pioneers of battery-powered, self-contained recording equipment characterized by complete independence from outside sources of power. Tapes recorded 'on the spot' with these units will faultlessly play back on all professional and standard recorders. Features found in heavy studio consoles have been incorporated so that high quality recording is made possible even under the most gruelling field conditions.

Extreme simplicity of design and elimination of troublesome and unnecessary non-portable features have made possible a really maintenance-free, foolproof, easy-to-operate, light-weight, compact recorder. These properties plus versatility and dependable performance have earned international acceptance for the Magnemite. 50 Diversified models available for every conceivable application. For complete technical specifications and direct factory prices write to Dept. WR:

NORA

NORETTE W 637

Amongst the numerous export radio receivers produced for many years by NORA RADIO, a branch of HELIOWATT WERKE, Berlin-Charlottenburg, Germany, two types particularly have been exported with success.

The first is the small NORETTE W 637 for AC. This is supplied with the following wave lengths: Short 1, short 2 and short 3. The receiver is thus specially suitable for short wave reception, and is of particular interest in countries where poor receiving conditions make it necessary to listen to short wave transmissions. The receiver is also very valuable to amateurs on account of these wave bands.

The very smart, red plastic cabinet is of small size to save packing and freight. The golden scale is particularly attractive.

The receiver combines great sensitivity and excellent reproduction. It is easy to operate as it is fitted with a push button system.

It contains 6 valves and 6 circuits, and is fitted with a new type of magic fan that reacts to even the weakest signals. The set also includes an Alnico magnet loudspeaker, a two stage tone control, and a very effective automatic volume control.

The receiver can be connected to 90–110/125/150/220/240 volts A.C.

UNIVERSAL W 648 Z

The other receiver is called UNIVERSAL W 648 Z. It is constructed for A.C. mains or a 6 volt car battery. The receiver covers 2 short, 1 medium and 1 long wave band.

The great importance and value of this receiver lies in the possibility of being able to connect both to A.C. and car batteries. UNIVERSAL W 648 Z is therefore particularly bought in places where no A.C. is available or where its supply is unfavourable. Should there later be a possibility of using A.C., it will not be necessary to purchase a new set, as it can easily be adapted for connection with A.C. The vibrator is placed in the chassis.

With its 6 valves and 6 circuits the UNIVERSAL W 648 Z is a most effective receiver. Its exterior is very attractive: dark brown plastic case, golden scale, brown knobs with golden rims. This receiver is naturally fitted with a modern magic fan also.

The tuning knobs include a continuous variable tone control. The receiver can be connected to 90–110/125/150/220/240 volts A.C.

WORTH MORE
when you *buy* them . . .

WORTH MORE
when you *sell* them!

Because they're designed for better performance on tomorrow's more crowded bands . . . because they're built with heavier components . . . because testing is more rigid . . . *new* National receivers have always been the biggest values in amateur radio — *used* National receivers have always commanded the biggest re-sale prices.

Invest wisely — in a National!
Write for free catalog of National receivers.

L'ACTIVITE DE LA COMPAGNIE FRANÇAISE THOMSON-HOUSTON EN MATIERE DE RADIODIFFUSION

Les matériels de radiodiffusion fabriqués par la COMPAGNIE FRANÇAISE THOMSON-HOUSTON comportent des émetteurs en ondes longues, moyennes ou courtes, dont les puissances vont de 50 watts à plus de 400 kW. La reconstruction du Réseau Français de Radiodiffusion après la guerre s'est effectuée en presque totalité avec des émetteurs C.F.T.H. et notamment celle du « Centre d'Allouis Ondes-Courtes ». Certains pays étrangers se sont également équipés avec ces mêmes émetteurs.

Le Centre Emetteur de Radiodiffusion de Strasbourg-Sélestat, par exemple, – inauguré en 1953 – est encore et généralement considéré comme LE PLUS MODERNE DU MONDE grâce à l'emploi de la technique révolutionnaire du Système Vapodyne, mise au point en 1950 par le Groupe Electronique de la COMPAGNIE FRANÇAISE THOMSON-HOUSTON.

Cette technique permet en effet de grouper, dans un bâtiment de dimensions exceptionnellement réduites, quatre émetteurs de 100 kW (TH. 755) et la totalité de leurs organes annexes. Ces quatre émetteurs peuvent être couplés deux à deux et assurer ainsi la diffusion simultanée de deux programmes distincts avec une puissance de 200 kilowatts.

Les caractéristiques exceptionnelles de cette station de radiodiffusion ont été rendues possibles par l'emploi de nouveaux tubes d'émission à filament de tungstène thorié dits « VAPOTRONS ». **Le rendement de l'installation se trouve considérablement augmenté** (60%).

Une maquette, ayant figuré successivement à la « Foire Internationale de MILAN » au mois d'avril puis à « l'Exposition Française de Montréal » en septembre dernier, permettait de se rendre compte comment l'énorme quantité de chaleur dissipée dans ces tubes à grande puissance est évacuée dans un bouilleur relié à un condenseur. Il en résulte une simplification considérable par rapport aux systèmes de refroidissement (eau ou air forcé) employés jusqu'ici; la chaleur évacuée peut d'autre part être récupérée pour des usages auxiliaires (chauffage du bâtiment).

Cet ensemble, réalisé avec des accessoires standard (bouilleur, réservoir témoin de niveau, coffret de sécurité, condenseur) était la reproduction exacte d'une installation pour refroidissement d'un Vapotron de 50 kW. Il est à noter que le VAPOTRON peut être également employé à d'autres applications (chauffage haute-fréquence par exemple) et spécialement aux émetteurs de radiocommunications.

Actuellement, la COMPAGNIE FRANÇAISE THOMSON-HOUSTON ne cesse d'accroître ses activités et ses réalisations parmi lesquelles il y a lieu de citer les principaux centres émetteurs suivants de radiodiffusion dont l'installation lui a été confiée aussi bien dans la Métropole et dans les Territoires de l'Union Française (AFRIQUE DU NORD – A.O.F. – INDOCHINE) qu'à l'Etranger:

– Postes régionaux divers –

THE ACTIVITY OF LA COMPAGNIE FRANÇAISE THOMSON-HOUSTON IN BROADCASTING MATERIAL

The broadcasting materials manufactured by LA COMPAGNIE FRANÇAISE THOMSON-HOUSTON cover longwave, medium wave and shortwave transmitters, the powers of which range from 50 watts to more than 400 kw. The reconstruction of the French broadcasting network after the war has been carried out nearly totally with C.F.T.H.-transmitters and especially the "Centre d'Al ouis Shortwave Transmitters". Certain foreign countries have equally been equipped with the same transmitters.

The Strasbourg-Selestat Central Broadcasting Transmitter, which was inaugurated in 1953, is for instance still and generally considered THE MOST MODERN STATION IN THE WORLD, thanks to the revolutionary "Vapodyne" system, prepared in 1950 by the Electronic Group of LA COMPAGNIE FRANÇAISE THOMSON-HOUSTON.

This technique permits, in fact, to install 4 100 kw-transmitters (TH. 755) together with all necessary units in a building of exceptionally reduced dimensions. These 4 transmitters can be used two at a time thus ensuring the simultaneous broadcasting of two different programmes with a power of 200 kilowatts.

The exceptional characteristics of this broadcasting station have been made possible by the employment of "VAPOTRONS", a new kind of transmission tubes with a filament of thoriated tungsten. **Thus the yield of the installation is considerably increased** (60%).

A model, shown succesively at the Milan Fair in april and at the French Exhibition at Montreal in September last, demonstrated how the enormous quantities of heat dissipated by these powerful tubes are evacuated into a boiler connected to a condenser. A considerable simplification is obtained by connection with the ordinary cooling systems (water or compressed air); on the other hand the evacuated heat can be recuperated for auxiliary purposes (heating of the building).

This ensemble, realised with standard accessories (boiler, level control reservoir, safety box, condenser) was the exact reproduction of a cooling installation for a "Vapotron" of 50 kw. It must be noted that the "Vapotron" can also be employed for other applications (highfrequency heating for instance) and especially for radiocommunication-transmitters.

At present LA COMPAGNIE FRANÇAISE THOMSON-HOUSTON are constantly increasing their activities and realisations, among which there is reason to mention the following principal broadcasting transmitters, the installation of which has been trusted to their organisation. These are to be found as well in the French Capital, and in the territories of The French Union (NORTH AFRICA – A.O.F. – INDOCHINE) as abroad:

ALGERIA (Algiers)

GIBRALTAR

"RADIO-AFRICA-GIBRALTAR" (Commercial)

ADDRESS: 9, rue de Russie, Tanger. – **Cable:** Rafrica Tanger.

LEADING PERSONALITIES: Dep. Adm.: J. D. de Bournet. Programmes: A. Domper. Chief Eng.: B. Settinger. Listeners Service: Mrs. Ramis.

SERVICE: Daily 16.00–16.45 in English and Spanish: 683 kc/s 439.2 m 1.25 kW.

ANNOUNCEMENTS: English: "This is radio-Africa-Gibraltar". – **Spanish:** "Aqui Radio-Africa-Gibraltar".

INTERVAL-SIGNAL: Ship Sirene.

VERIFICATION by QSL-card.

F.M. Future Plans:
Nine F.M. Stations are to be built in the first stage of the V.H.F. F.M. Sound Broadcasting scheme, seven in England, one in Scotland and one in Northern Ireland. At each station six transmitters will be installed, two in parallel for each of the three programmes (Home Service, Light Programme and Third Programme) to be radiated. The first to be brought into service will be at Wrotham, Kent, where two experimental transmitters have been in use since 1950. The other eight stations are to be completed by the end of 1956. Pontop Pike and Divis will be the second and third to go into operation. Details of frequencies to be used are not yet known, but the powers of the projected transmitters will be as follows:
Wrotham (Kent) (120 kW E.R.P.) – Pontop Pike (Newcastle) (60 kW E.R.P.) – Divis (Belfast, N.Ireland) (60 kW E.R.P.) – South Devon (60 kW E.R.P.) – Meldrum (Aberdeenshire, Scotland) (60 kW E.R.P.) – Holme Moss (Manchester) (120 kW E.R.P.) – Sutton Coldfield (Birmingham) (120 kW E.R.P.) – Norwich (Norfolk) (120 kW E.R.P.) – West Wales (60 kW E.R.P.)

"HAPPY STATION":

These programmes, produced and presented by Edward Startz, are of 90 minutes duration, consisting of: Musical entertainment, linked by polygot announcements. They are usually supplemented by features of universal interest. Special programme in Spanish and Portuguese for the Latin countries. "Mailbag" answering listeners' mail by calls to all parts of the globe. From its inception in 1928 – with exc. of the war years – 1955 marks the 27th year of the "Happy Station"s round the world broadcasting.

ANNOUNCEMENT: Dutch: "Hier Radio Nederland in Hilversum", **English:** "This is the International Service of Radio Nederland in Hilversum, Holland". – **Indonesian:** "Disini Hilversum, Siaran Indonesia Radio Nederland". – **Spanish:** "Aqui Radio Nederland de Hilversum, Holanda". – **Arabic:** "Huna Hilversum – al-idha'atu'l hulandiya bi'l-lughati'l-Arabiya-".

GENERAL INTERVAL-SIGNAL: Old Dutch folk-song called: "Merk toch hoe sterck" played on carillon or celesta on all frequencies.

VERIFICATION by letter or QSL-card.

FUTURE PLANS: Two 100 kW-stations probably ready for operation in the course of 1955.

TRANSCRIPTION SERVICE: A free service to foreign stations. Issues complete programmes about Holland both informative and musical.

PROGRAMME BULLETINS in **Dutch, English, Spanish, Afrikaans, Arabic** and **Indonesian** are sent free of charge on application.

Deutsche Welle: Deutsche Welle receives thousand of letters from listeners all over world, which all are answered by letter and QSL-card (left).
Emissora Nacional de Radiodifusao Lisboa: Announcer D. Joao Da Camara.

Tromsö Short Wave Transmitter broadcasts daily the entire Home Sce. Progr.: In the morning on 9550 kc/s before and on 7210 kc/s after 15.00.

ANNOUNCEMENT: "This is R. Norway with its short wave service for Norwegians abroad".

INTERVAL-SIGNAL: Every s.w. transmission to Norwegians abroad is introduced by a Norwegian folkmelody from Hallingdal.

Message to our English-speaking audience: In our daily special programmes for Norwegians abroad we will usually have a section of Norwegian music or music presented by Norwegian artists. This musical section, which lasts 15 to 20 minutes, is introduced in English as well as in Norwegian. On Wednesdays and Saturdays you can listen to our **"Letter Box Programme"**, in which we play our listener's request records. We often receive letters from listeners in Norway with request to play a record with a greeting to one of their relatives abroad, but we regret to be unable to comply with these requests.
Every Sunday we have an additional programme in English, "Norway this week", in which we try to present Norway in different ways through music and feature programmes. We are very grateful for comments on our transmissions. Reports are answered by QSL-card. Return postage is not necessary. Our postal address is: RADIO NORWAY, Oslo, Norway.

FIXED PROGRAMMES: French:
News: 06.15, 07.45. – **Commentary:** Wed., Thurs.: 06.30, 08.15. – **Music by Request:** Sat.: 06.02, 07.55. – **Religious:** Sun. 07.55. – **Mailbag:** Sun.: 06.30, 08.15.

FIXED PROGRAMMES: Indonesian:
News: 10.30. – **Commentary:** Thurs. 10.45. – **Mailbag:** Sun. 10.42. – **Listeners Choice:** Sun. 10.02. – **THAI: News:** 12.30 (Fri. only).

ANNOUNCEMENTS: "This is Radio Australia Calling" or "This is Radio Australia transmitting the Overseas Service of the Australian Broadcasting Commission".

TUNING AND INTERVAL-SIGNAL: Music box playing "Waltzing Mathilda" for five minutes preceding transmissions. Transmissions commence with clock chimes and the laugh of the Kookaburra. Gongs are used as programme cues only. "Waltzing Mathilda" in March tempo precedes and concludes all New's Bulletins. Indonesian transmissions open with "Waltzing Mathilda" played on piano-accordian with instrument ensemble. Thai transmissions open with "The People's Song" and conclude with the Thai National Anthem.

VERIFICATION by QSL-card. A 20 page Programme Guide is published quarterly and issued free of charge.

PRIVATELY OWNED COMMERCIAL BROADCASTING STATIONS
in operation on 31st August, 1954.

2CH is controlled by the New South Wales Council of Churches and 2S by the Roman Catholic Church.

D = Daylight Power. N = Night Power.

G.E.C.

GERMANIUM CRYSTAL DIODES

are indicated here because...

The use of the Germanium Diode is now firmly established in current T/V practice — and indeed for Radio and Electronic equipment. The glass sealed type is recognised everywhere as being the most reliable and of the highest possible quality.

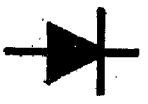
The design of the G.E.C. Germanium Diode was perfected over three years ago, since when no major alteration has been necessary. There is already a large range of types available, but this is continually being enlarged, and types are now obtainable that were previously restricted essential industries.

Type	Description	List Price
GEX 35	T/V vision detector	6/-
GEX 44/1	T/V sound detector and limiter	7/6d.
GEX 45/1	General purpose diode	10/-
GEX 55/1	High back resistance diode	16/-
GEX 54	High back resistance diode	£1.0.0
GEX 54/3	100 V diode	£1.5.0
GEX 54/4	150 V diode	£1.10.0
GEX 54/5	200 V diode	£1.15.0
GEX 66	100-1000 Mc/Sec Mixer	12/6d.
GEX 64	Telephone modulator	£1.0.0
GEX 34	Set makers version of GEX 44/1	—

They are of small size, low capacitance, and high forward conductance.

Being so small, they can be soldered directly into the part of the circuit where they are wanted.

Heater wiring and valve holders are not required, and they can be tried with great ease in various circuit arrangements.



The crystals are hermetically sealed in glass, making penetration by characteristic-destroying moisture impossible.

A minimum life of 10,000 hours means that they need not be easily accessible for replacement.

Data on specific types for special applications is available on request from the Osram Valve and Electronics Dept.

UNITED STATES OF AMERICA

VOICE OF AMERICA (Government)

"THE VOICE OF AMERICA" is operated by the Broadcasting Service of the U.S. Information Agency. The VOA seeks to promote an increased understanding of the United States among the peoples of the world and to strengthen cooperative international relations.

VOA radio relay installations are located at Honolulu, Manila, Colombo, Okinawa, Munich, Tangier, Salonika and aboard VOA's floating transmitter – the U.S. Coast Guard Cutter Courier. Relay facilities are also leased from the BBC.

Programs are written, produced and broadcast from studios in Washington, D.C., New York City and Munich, Germany.

ADDRESS: The Voice of America, Washington 25, D.C., USA.

LEADING PERSONALITIES: Director, U.S.: Theodore C. Streibert. Information Agency: Assistant Director for Broadcasting: J. R. Poppele. Program Manager: Gene King. Chief Engineer: Edgar T. Martin. Facilities Manager: Harold O. Wright.

U.S.A.

ARMED FORCES RADIO and TELEVISION SERVICE

ADDRESS: Office of Armed Forces Information and Education. Washington 25. D. C.
This office exercises overall policy control of the Armed Forces Radio and Television Service. The mission of AFRTS is to keep United States service men and women stationed outside the States the best informed service personnel in the world on current events. **All broadcasts are in English.** Entertainment and educational programs go out in disc form, to be broadcast to local military audiences by 69 armed forces radio stations in overseas areas. News, sports and other timely matter is beamed overseas directly by twelve powerful transmitters on the U.S. Atlantic and Pacific coasts. These shortwave broadcasts serve both the overseas radio stations, which relay them locally, and the more remotely situated individual military listeners with their own shortwave radio receivers. Programmes other than news and locally produced programmes are derived directly from the U.S. Commercial Networks. News is compiled directly from the wires of A.P., N.P. and JNS.

AFRS presents regular shortwave programmes from both Los Angeles and New York City, using the transmitters of the Voice of America.

EUROPEAN SERVICE (from New York)

ADDRESS: Officer in Charge, Armed Forces Press, Radio and Television Service, 641 Washington Str., New York 14, N.Y.

Return postage not required.

Each Sunday between 12.30 and 15.00 GMT (08.00 and 10.30 a.m. Caracas time) a programme is broadcast entitled "Sunday phantasies". This is drawn up on the basis of selected classical music (opera, symphonies etc.). A considerable body of listeners has been obtained, not only on account of the music selected, but also by reason of the comment made upon it, as in most cases the date of the first performance and other particulars of the work are given.

The Shell hour, which is a very select concert programme, is composed of recognized musicians long associated with us. This program is broadcast every Wednesday from 01.30 to 02.30 (9 to 10 p.m. Caracas time).

R. CULTURA – 5050/1100 kc/s – ADDRESS: La Emisora de los Exitos, Caracas. – ITALIAN: W. 01.30–02.30. – VERIFICATION by QSL-card.

WORLD TELEVISION

A world survey based on information received from television stations as answers to questionnairies.

The principal television systems:

Definition refers to the broadcast standard which is normally stated in terms of the number of lines which make up the image. Reference in the following surveys is made throughout merely to 405 lines, 525 lines, 625 lines (CCIR*), 625 lines (Sovjet**) and 819 lines respectively.

Details of these five definitions are given in the following table:

	Systems			
Number of lines per picture	405	525	625*)	819
Video bandwidth (Mc/s)	3	4	5	10.4
Channel width (Mc/s)	5	6	7	14
Sound carrier relative to vision carrier (Mc/s)	—3.5	+4.5	+5.5	—11.15
Sound carrier relative to edge of channel (Mc/s)	0.25	—0.25	—0.25	+0.10
Interlace	2/1	2/1	2/1	2/1
Line frequency (c/s)	10,125	15,750	15,625	20.475
Field frequency (c/s)	50	60	50	50
Picture frequency (c/s)	25	30	25	25
Sense of vision modulation	Positive	Negative	Negative	Positive
Level of black as percentage of peak carrier	30	75	75	25
Sound modulation	AM	FM	FM	AM

*) The International Radio Consultative Committee.

**) The characteristics are the same as 625 lines CCIR exc. for a difference in bandwidth: video bandwidth 6 Mc/s, channel width 8 Mc/s, sound carrier relative to vision carrier +6.5 Mc/s.

The following pages give you the data of the different TV stations of the world. The channel is indicated by a letter followed by a figure. The letter indicates the technical data of the systems which are in use (A: America, B: British etc.) and the figure is the channel number. The effective radiated power in kW for the vision carrier is indicated; and for the sound carrier the output power normally is 1/4 to 1/2 of the vision power.

On ultra short waves, i.e. bands for FM and TV, it is general practice to specify the apparent or effective radiated power (ERP), which is the

transmitter power multiplied by the power gain obtained by the antenna. This gain is normally accomplished by concentrating the radiated power under a low angle, as the power radiated under higher angles is wasted into space.

EUROPE

BELGIUM (Govt.)

Address: Institut National Belge de Television, 31 rue Dautzenberg, Bruxelles. – **Leading Personalities:** Director French TV: Ph. Kammans. Director Flemish TV: Bert Leysen.
Stations: Bruxelles. – **French Programme:** 19.30–21.30 (exc. Fri.): Definition 819 lines. Modulation: vision positiv, sound AM.
Ch. E8 vision 196.25 mc/s 2 kW, sound 201.75 mc/s 0.5 kW – **Flemish Programme:** 18.30–20.00 (exc. Mo.): Definition 625 lines. Ch. E10 vision 210.25 mc/s 2 kW, sound 215.75 mc/s 0.5 kW. – **Character of Programmes:** Actualities, features, plays etc. – **Future Plans:** At the end of 1954 opening of relay stations: Antwerp (Flemish): 625 lines 48.25 mc/s 0.5 kW. Liége (French): 819 lines 55.25 mc/s 0.5 kW.

DENMARK (Govt.)

Address: Television Department, State Broadcast, Radiohuset, Rosenørnsalle, Copenhagen. – **Leading Personality:** Chief of Programmes: J. Fr. Lawaetz. – **Station:** Ch E4 vision 0.5 sound 0.2 kW.
Daily Programmes: D. 19.00–20.00. Mo. also 14.30–15.00. **Children Hour:** Tues., Thurs. 14.30–15.00. Fri. 17.00–17.30.
Future Plans: Stations planned in Copenhagen, Aarhus, Odense, Rangstrup, Aalborg, Skive, and Næstved – The new station in Copenhagen will open approx. April 1955 vision 10 kW sound 3 kW ChE4.

CZECHOSLOVAKIA

CENTRAL TELEVISION STUDIO, PRAHA (Govt.)
Address: Ceskoslovensky Rozhlas, 12 Stalinova, Praha XII. – **Station:** Ch. R2 49.75 mc/s (vision), 56.25 mc/s (sound). – **Daily Programmes:** Tues., Fri., Sun. 19.00–21.00. Thurs. 17.00–20.00.

FRANCE

RADIODIFFUSION-TELEVISION FRANCAISE (Govt.)

Address: Relations Internationales de la Television, Radiodiffusion-Television-Francaise, 107, rue de Grenelle, Paris 7e. – **Leading Personality:** Dir. Television Progr.: M. D. Arcy.
Stations: Definition 819. Modulation: Sound AM.

GERMANY

GERMAN FEDERAL REPUBLIC

Television has been developed by the various radio organizations (Rundfunkanstalten) and particularly the Nordwestdeutscher Rundfunk.
Relay Facilities for the German television network are constructed by the German postal authorities:
1) Hamburg–Köln with intermediary transmitters at Hannover and Langenberg, a link which uses eight relay towers.
2) a special pick-up at Hamburg for broadcasts to and from Berlin and their relay to and from Hamburg.
3) Continuation of the Hamburg–Köln link to Frankfurt, Stuttgart, Munich and Baden-Baden.
The same programme for all broadcasting organizations in West-Germany, 40% from NWDR, 20% from Bayerischer Rundfunk and 40% from the other organizations.

NORDWESTDEUTSCHER RUNDFUNK

Address: Hamburg-Lokstedt, Gazellenkamp 57.

UNITED STATES

32 educational stations are operated by schools and colleges and approx 600 stations are privately owned commercial stations. The NBC-TV network consists of 175 stations, CBC-TV network of 184 stations and the ABC network of 212 stations.

Colour television is approved for use in USA. The system uses the same scanning rates as black-and-white and is compatible (it can be received in black and white on these sets and in colour on colour sets automatically). There are only about 10000 colour receivers in use.

THE ARMED FORCES TELEVISION SERVICE

AFRS operates an experimental TV station at Limestone, Maine, USA. Plans for the use of television by the Armed Forces Overseas are under study. The first exp. television station was opened in Portugal in October.

A DIRECTORY OF THE ADVERTISERS

AMPLIFIER CORPORATION OF AMERICA, 398 Broadway, New York 13, USA. Cable: "Amplifiers":

Manufacturers of portable, batteryoperated magnetic recorders.

See advertisement page 26.

RADIO AUSTRALIA – AUSTRALIAN BROADCASTING COMMISSION, Post Office Box 780 H.G.P.O., Melbourne, Australia:

See advertisement page 18 and text page 96.

BERLINGSKE TIDENDE, Pilestræde 34, Copenhagen:

See advertisement page 28.

CANADIAN BROADCASTING CORPORATION, INTERNATIONAL SERVICE, P.O. Box 6000, Montreal, Quebec, Canada:

See advertisement page 13 and text page 102–104.

COSMOCORD, LIMITED, Enfield, Middlesex, England:

Cosmocord are manufacturers of the world famous range of ACOS crystal gramophone pick-ups and microphones. The recently introduced ACOS "Hi-g" series of pick-ups has been specially designed to meet the difficult reproduction and tracking problems created by the latest types of microgroove records. These pick-ups will in fact track not only all present day records but those of the foreseeable future too, ensuring high fidelity reproduction with minimum record wear.

ACOS crystal microphones have been designed as high quality instruments for tape and disc recording, public address work and for the enthusiastic radio amateur. Hand, stand and desk models are available at the lowest possible prices consistent with their high quality.

See advertisement page 20.

COMPAGNIE FRANCAISE THOMSON – HOUSTON, Groupe Electronique, 173 Boulevard Haussmann, Paris VIII, France:

DANISH STATE RADIO, Radio House, Rosenørns Alle 22, Copenhagen V:

See advertisement page 2 and text page 37.

ELECTRIC AND MUSICAL INDUSTRIES LTD. (E.M.I.), INTERNATIONAL DEPARTMENT, Hayes, Middlesex, England:

The E.M.I. high fidelity magnetic tape recorder Model BTR/2 is intended to meet the most exacting requirements of professional technicians engaged in broadcasting, recording and research work, who require to record and reproduce sound with supreme accuracy. It is extensively used by the B.B.C. and many other leading broadcasting and recording organisations throughout the world.

Two versions are available, each giving a choice of two operating speeds, i.e. 15″ per second and 7½″ per second in the case of the

BTR/2A; or 30" per second and 15" per second in the case of the BTR/2B. The claim is justifiably made that E.M.I. has produced the best Tape Recorder yet devised as a result of their unequalled experience and knowledge in the science of sound recording and reproduction.
See advertisement second coverpage.

FRATHOM COMPANY, 32 West 42nd St., New York 36, N.Y., USA:
Browning Laboratories Inc.: Oscillocopes – Dunn Engineering Associates: Test instruments. – Green Instrument Company: Green Pantograph Engravers – Haumann Instrument Company: Electronic Flash Gun – Erik A. Lindgren and Associates: Protective screen enclosures Bronze and Copper – H.W. Leighton Laboratories: Medical Tubes – Mepco, Inc.: Precision Resistors – Microdot Division, Felts Corporation: Miniature Coaxial Cables and Connectors – Midwestern Geophysical Laboratories: Exploration and Flight Test Instruments – Millivac Instrument Corporation: Precision Meters – F. L. Moseley Company: XY Recorders – Penta Laboratories Inc.: Transmitting and special purpose tubes – Potter Instrument Company: Electronic counter and scalers – Resin Industries: Vinyl tapes, tubing and webbing – Sanborn Company: Direct Writing Industrial Recording Systems – San Fernando Electric Manufacturing Corporation: Precision Capacitors – Teletronics Laboratory Inc.: Testing Instruments – Volkers and Schaffer Manufacturing Corporation: Ultra Sensitive Oscillographs. –
Also full range of precision potentiometers and any type of transmitting and receiving instruments.
See advertisement page 24 and 25.

GATES RADIO COMPANY INTERNATIONAL DIVISION, 13 East 40th Street, New York 16, N.Y., USA:
See advertisement page 23.

THE GENERAL ELECTRIC COMPANY LTD. OF ENGLAND, Magnet House, Kingsway, London, W.C.2, England:
The products of the Valve and Electronics Dept., include Receiving and Transmitting Valves of all types, Germanium and Silicon Diodes, Transistors, Television and Industrial Cathode Ray Tubes and a large variety of Electronic Devices. The range of Audio Valves are universally known and includes the world famous KT.66 beam tetrode.
Recent additions to the Valve range include types for F.M. and V.H.F. reception and the KT.55 25 watt AC/DC output Tetrode with the high slope of 14 m A/V.
Full technical information on all Valve and Electronic products and particulars of a comprehensive technical Data Service can be obtained on application to the local G.E.C. Branch, or Agent, or direct from the Head Office in London.
See advertisement page 105.

HELIOWATT WERKE EAG, DEPT., NORA RADIO, Berlin-Charlottenburg, West-Berlin (Germany):
The well-known German radio factory Heliowatt Werke EAG, Berlin-Charlottenburg, has always exported its Nora receivers all over the world. At the end of the last World war this tradition was resumed to an increased extent. Thousands of Nora receiver have found enthusiastic purchasers everywhere. The high quality and performance of this receiver have made it necessary repeatedly to enlarge the export programme, so that the wishes of nearly all their customers can now be met.
Attention is drawn not only to the NORA export models NORETTE W637 and UNIVERSAL W648Z, full details of which are to be found on page 27, but also, for example, to Nora DUX W748, PAGANINI W648, and the popular NORA VOX W676, the super with bandspread. HELIOWATT WERKE will be happy to send further particulars on application to their address above.

SWISS SHORTWAVE SERVICE,
Neuengasse 28, Berne, Switzerland:

The Swiss Shortwave Service, a branch of the Swiss Broadcasting Corporation—a non profit making organisation—has been in existence since the late thirties and has built itself up a wide listening audience in all parts of the world. One of its chief aims is to give objective news comment, emanating from this country whose neutrality permits impartiality and whose position in the centre of Europe provides an excellent observation point for world events. By utilising in its varied programmes the languages most commonly used as linguae francae all over the globe, the Swiss Shortwave Service spreads news and information about a country whose international leanings are well known, interprets the activities of its neighbours near and far, and thus attempts to contribute to lasting peace through understanding. An important function of the Swiss Shortwave Service is, in addition, to maintain a close link between the ten per cent of the Swiss population living abroad and the home country.

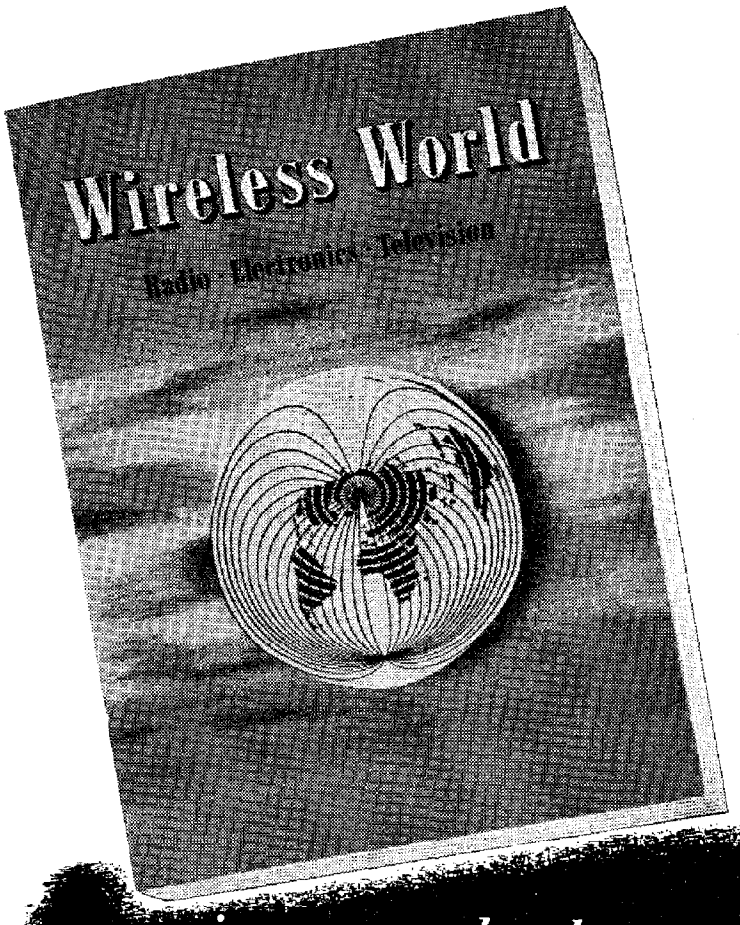
Thanks go to Ken Boord, Short-Wave Editor. RADIO & TELEVISION NEWS, 948 Stewartstown Road, Morgantown, West Virginia, U.S.A., for his cooperation in giving publicity to this edition of WRH. R & TVN, which circulates worldwide, is available for £ 4 a year to subscribers in U.S.A., Canada, Mexico, South America, in all other countries £ 5.



covering every development of world radio, television and electronics . . .

WIRELESS WORLD – the first radio journal ever published – is the leading source of information for technicians, designers and manufacturers in all branches of radio, television and electronics. Month by month its pages cover every phase of radio and allied practice, and provide a complete and accurate survey of the newest techniques in British design and manufacture.

Theoretical articles by recognized experts deal with new developments, whilst design data and circuits for every application are also published regularly. Read WIRELESS WORLD . . . every month. Annual subscription £1-7-0.

DORSET HOUSE, STAMFORD ST., LONDON S.E.1, ENGLAND

. . . technical books of inestimable value

FOUNDATIONS OF WIRELESS:
M. G. Scroggie, B. SC., M.I.E.E.

Deals with the basic theory of radio, from the most elementary principles. Covers receivers, transmitters, aerials, power supplies and transmission lines, etc., with an introduction to TV and radar technique. 12/6 net. (By post 13/-).

INTRODUCTION TO VALVES:
R. W. Hallows, M.A. (Cantab.) M.I.E.E.

Describes the principles, construction, characteristics and uses of most types of radio valves. The approach is simple and, as far as possible, non-mathematical, but the book provides the student with a thorough understanding of valves and how they work. 8/6 net. (By post 8/10).

RADIO LABORATORY HANDBOOK:
M. G. Scroggie, B.SC., M.I.E.E.

Deals with the layout and furnishing of a laboratory and the various types of equipment, commercial and improvised; measurements and tests; sources of power, etc., and has a large section devoted to general principles and reference material. 25/- net. (By post 26/3).

SHORT-WAVE RADIO & THE IONOSPHERE:
T. W. Bennington (BBC)

Long-distance, short-wave communication is dependent on the state of the ionosphere, which is constantly changing. This book explains the reasons for these changes and show how they influence the choice of wavelength for ensuring effective communication. 10/6 net. (By post 10/10).

The above technical books are published in conjunction with

Wireless World
